

# A LIFELINE FOR ANIMALS IN FIJI

ANNUAL REPORT 2020

# OUR MISSION

To improve the welfare of all animals, domesticated & wildlife - resulting in better lives for both the animals and humans of Fiji, while helping to build a society without animal cruelty.

# CO-FOUNDER & MANAGING TRUSTEE

Each year our annual report encapsulates the year just gone. It's an opportunity to reflect on and summarize all that we achieved and to thank all of our supporters.

So, how do I begin to summarize such a strange and challenging year? Well, the quickest way to do it is simply to say, "Woohoo, we made it!".

Life in animal welfare is anything but smooth sailing at the best of times. But with additional complications due to COVID-19, 2020 was like nothing we've ever experienced. The butterfly effect from the pandemic worldwide is significant and yet to be fully assessed.

The professional and personal impacts on our team were substantial yet with plenty of strength, willpower and care for one another, we were able to continue our mission to build a lifeline for the animals in a small country in the South Pacific. I am extremely proud, and I know without a doubt that myself and the entire Animals Fiji vuvale ("family") are committed to achieving our long term goals.

One thing is for certain: our team is more united and more of a vuvale now than ever before. And this family includes each of our supporters who fostered, adopted, donated, shared our message, and cheered us on--VINAKA! The power of collective impact is truly extraordinary. So let's look ahead at what we can do to change tack and make the long lasting differences we all want for animal and humans in Fiji.

Unfortunately, we aren't able to name every single person or organization that has contributed thus far, but please know that we are extremely grateful to you all.

On behalf of the entire Animals Fiji team--

**THANK YOU, VINAKA VAKA LEVU, & DHANYAVAAD!**

- Casey.

# 2020 IN NUMBERS

Despite only having two operating veterinarians for most of 2020, we were still able to spay and neuter over 1,238 animals in 365 days. That's more than three desexing surgeries each day, not including emergency surgeries.

2020 also marked the second largest amount of surrenders in our nine year history. With more education, outreach and community engagement, the number of animals in need will continue to decrease. Our goal is for our proactive work to eventually make our shelter--and all other shelters nationally--obsolete.

# WHAT WE DO

**1.VETERINARY SERVICES**

**2.WELFARE SERVICES**

**3.TNR & COMMUNITY COLONY GUIDANCE**

**4.GROOMING & BOARDING**

**5.EXPORT ASSISTANCE**

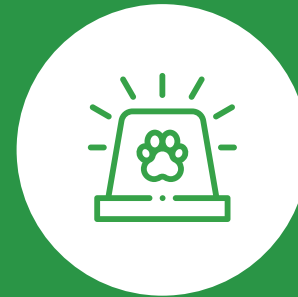

**6.EDUCATION**

**7.COMMUNITY OUTREACH**

**8.SHELTER**

**9.EMERGENCY SERVICES**

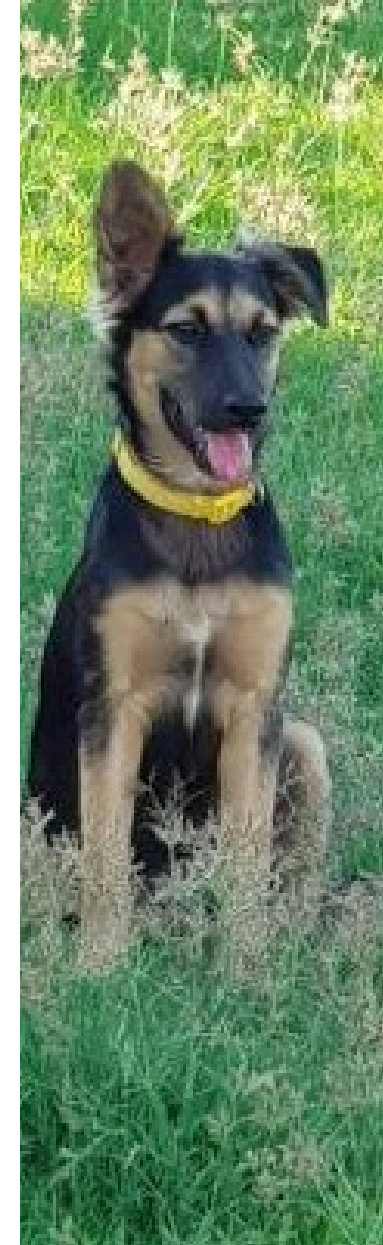

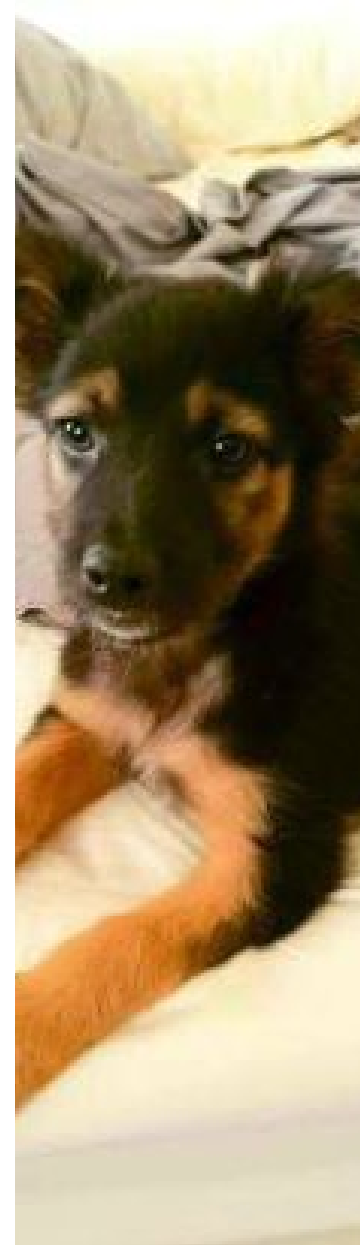

# 1. VETERINARY SERVICES

The veterinary medicine practices we offer encompass the prevention, control, diagnosis, and treatment of diseases, injuries, and disorders in animals.

All these services are provided at highly subsidized rates and instead of offering completely free services to a few, a subsidy for all ensures that we can assist more animals. In 2020, the donation of more diagnostic tools including two centrifuges, an ECG machine, a blood pressure machine, and a pulse oximeter ensure we can better and more efficiently diagnose and treat our four legged friends, just like Marley.

## MARLEY'S STORY

Marley has been coming to Animals Fiji since she was just a tiny, two kilogram (four pound) pup. Her mum and dad found her on the street and decided to rescue her, giving her a forever home. We've been there to provide her mange treatment when she was first rescued, administer her vaccinations and parasite treatments and complete her spaying. We've also loved seeing her each year when she returns for her annual check-ups.

In May 2020, a strange growth on her gums caused concern and she came to us for a check. The diagnosis was canine acanthomatous ameloblastoma, an oral tumor that is destructive and invasive, attacking the bone and teeth. The treatment was a new trial with less than a handful of studies published on its effectiveness, but Marley's parents were willing to try. The treatment was successful in drastically reducing the tumor and giving Marley her quality of life back.

This is something that will have to be monitored for the rest of Marley's life, but she is now a cancer survivor!

**Veterinary medicine has saved Marley, allowing her to continue bringing joy to all those she meets.**

# TOTAL OF OUR SUBSIDIES FOR 2020

## FJ \$98,000

### DESEX (SPAY/NEUTER)

Cost To Animals Fiji **FJ \$200**

What we charge the public **FJ \$45**

Discount **77%**

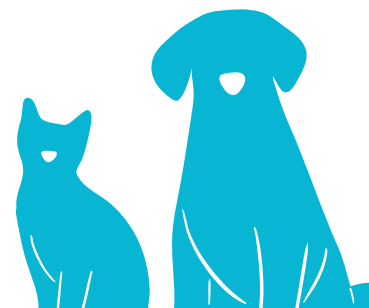

### CONSULTATION

Cost To Animals Fiji **FJ \$70**  
(includes time & overheads)

What we charge the public **FJ \$10.90**

Discount **84%**

# OUR SUBSIDIES

### ADOPTIONS

Cost To Animals Fiji **FJ \$350**  
(on average)

What we charge the public **FJ \$50**

Discount **86%**

### OTHER SURGERIES

Cost To Animals Fiji **FJ \$250**

What we charge the public **FJ \$100**

Discount **60%**

## 2. WELFARE SERVICES

In cases where people cannot afford the already subsidized fees, we further discount services and treatments to ensure that pets, own-roaming animals and strays receive the veterinary treatment they so need.

Brenza was one of the **5,549** animals Animals Fiji helped in 2020 and the associated expenses were part of the **FJ \$98,000** of free or discounted welfare services we provided over the last year.

### BRENZA'S STORY

We first met Brenza at our Savusavu clinic in February last year when he was brought in for help after being hit by a car and sustaining a broken leg. Despite not being able to afford treatment, Brenza's family came to us for help.

Unfortunately, there is no X-ray machine available for animals on the second largest island of Fiji, Vanua Levu—and this is something we are fundraising for in 2021. Given the circumstances, Animals Fiji worked quickly to get Brenza on a flight from Savusavu, Vanua Levu to our clinic in Nadi, Viti Levu, where Brenza was X-rayed and treated. Regrettably, his hind leg could not be saved as there was also a fracture to his femoral head, so we had to amputate. After surgery Brenza remained at our Nadi clinic and hospital until he was healthy enough to make his journey back home to Savusavu, where he is still happily living his life as a three-legged doggo.

Animals Fiji provided Brenza with the ability to get on a flight to and from Nadi; food, shelter, and comfort while staying at our Nadi clinic and hospital; as well as the medication and treatment he needed all without his parents worrying about their bill.

# 3. TRAP, NEUTER & RETURN AND COMMUNITY COLONY GUIDANCE

**Due to the impacts of Covid-19 on Fiji we weren't able to progress our trap, neuter and return (TNR) efforts with resorts, businesses and municipal councils like we had hoped. However, through Enrit's extraordinary efforts it is clear that individuals can make an enormous difference to communities through humane population control.**

Many stakeholders now realize that humane population control is not something that can be put on the backburner. Human-animal conflict will only grow if we do not address the issues of population control head-on. Therefore, we have the task of completing two years of work in one (2021), to get these efforts back on track. But we need Enrit and others like you to join us by helping your neighbours bring their animals for desexing /check-ups, sponsoring a stray in your area, or contacting us about a desexing clinic in your neighborhood. In 2021, we are increasing our capacity to four full-time veterinarians. This will allow us to get back to doing TNR and outreach clinics on a much more regular basis.

## ENRIT RAJ SHARMA'S STORY

**In 2020, Enrit Raj Sharma, with Animals Fiji's assistance and guidance, helped to trap, desex and rehome or return 12 animals in need from his community in Korovuto, Nadi. He has shown the animals in his area the love and kindness they've needed to survive and thrive.**

It is people like Enrit and their unbelievable capacity for care and kindness towards animals that drives our passion for animal welfare. Enrit is not alone in helping animals in his area, but we certainly could use a lot more community animal advocates like him.

We asked Enrit what fueled his passion to care for animals and he simply said,

**“It hurts me to see an animal suffering. Animals aren't selfish; all they need is food, shelter and a little bit of love.”**

- Enrit Raj Sharma

# 4. GROOMING & BOARDING

Providing boarding and grooming services not only helps the animals and their families, but also provides us with the means to further subsidize our welfare and basic veterinary care services.

## MAMA G'S STORY

**Mama G, a two year old Boer Cross goat, was brought in as she was heavily pregnant and severely distressed. Her farm was attacked by dogs and the stress was causing her to stop eating and go into false labour.**

After a full check-up and ultrasound we estimated that she was four months pregnant (full-term being five months). Mama G and her unborn kid were healthy, but just needed to be in a stress free environment until she gave birth.

Her family asked if we could board her until she laboured to ensure her safety and allow them time to secure their fence line.

**Animals Fiji ensured she had a safe spot away from the shelter animals where she could happily graze with her pregnant belly.**

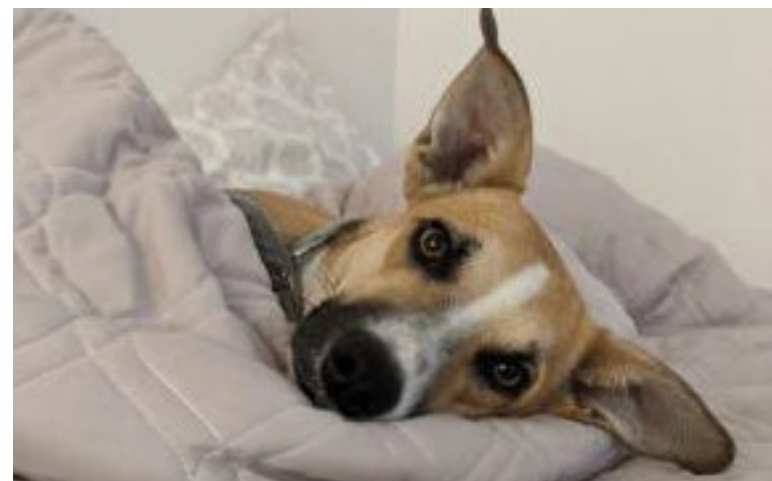

Three weeks later, Mama G gave birth to a beautiful male kid. The day after giving birth and a check by Dr. Ashitosh, mum and son were ready to return home.

BEFORE

AFTER

# 5. EXPORT ASSISTANCE

2020 was a very emotional year, especially for those having to abruptly move overseas. Animals Fiji was privileged to be there to assist people like Lauren with relocating their precious family members.

## LATTE AND LAUREN'S STORY

In late October, Lauren reached out to us desperate for some help and guidance so that she could take her dog, Latte, to the USA with her.

Latte was found with her puppy siblings in a box on the side of the road near Momi Village. After bringing them for a check-up and basic treatments at Animals Fiji, Lauren planned to take care of them and find homes for all of the dogs.

But as it so often happens, Lauren fell in love with one particular puppy in the group, Latte, and wanted to know how she could take Latte back to the USA with her. Animals Fiji gave Lauren support, practical advice and resources to help make the transition as smooth as possible.

Lauren and Latte now live happily together in Salt Lake City, Utah.

**“It’s been a bit of an adjustment from Fiji, but she seems really happy and she loves the snow. She spends a lot of time going on walks by the river or on hikes in the snowy mountains. Thank you so much for everything you did to help with our transition to the states. I will always have a deep appreciation for you and all your staff at Animals Fiji! When I have to take Latte to the vet here I always wish I was coming to you guys instead!” – Lauren.**

# 6. EDUCATION

Providing education on animal welfare is one of the most rewarding aspects of our work. At the end of each day, we hope that those we connect with will go home and impart the knowledge of animal care onto their families and friends--creating a domino effect for animal welfare to spread.

**Only through this formal indoctrination of animal welfare will we start to see the necessary changes in human behaviour towards animals and ensure we don't ever see another case like Poppy's or Jordan's again.**

## JORDAN'S STORY

In May, Jordan was brought to our Nadi clinic by The Greater Good Foundation. Jordan had a trauma to the face which was consistent with a cane knife cut, similar to our beloved and most famous shelter dog, Poppy, from 2012. Like Poppy, Jordan also had cropped ears which is a practice commonly inflicted upon dogs in Fiji for the purpose of pig-hunting. This extremely cruel procedure does not increase a dog's ability to hunt or catch wild pigs – but it is a common misconception in Fiji that this is indeed the case.

Jordan was found to have dozens of significant health issues, but most of the diagnoses were treatable. His gentle sweet nature, despite the horrific trauma, needed no readjustments except for us to give him tender love and care.

Unfortunately, Jordan's health began to rapidly decline and we came to the heartbreaking conclusion that all opportunities to 'fix' Jordan had been exhausted. We sedated him and then gently euthanized him to pass on where he could be in peace and no longer suffer.

In late 2020, we used the two very similar cases of Poppy and Jordan as further motivation to bring the education section of our work to the forefront. Think Pacific, a charity and student volunteer organisation, reached out to us. The end result of working together will be a standard workbook along with an 'Animal Welfare Teachers Guide' for Years 1 to 8 which we will then lobby to the Ministry of Education to incorporate into the Fiji Curriculum.

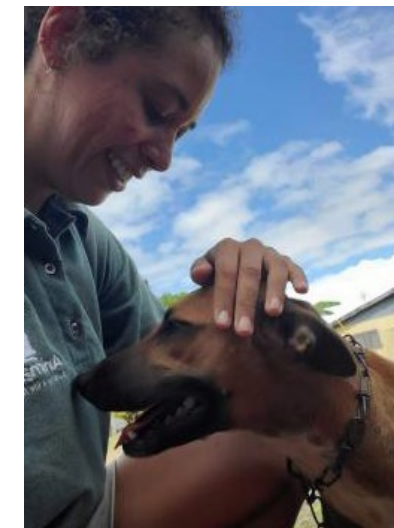

“There comes a time where we  
need to stop just pulling people  
out of the river.

We need to go upstream and find  
out why they’re falling in.”

**ARCHBISHOP DESMOND TUTU**

# 7.COMMUNITY OUTREACH

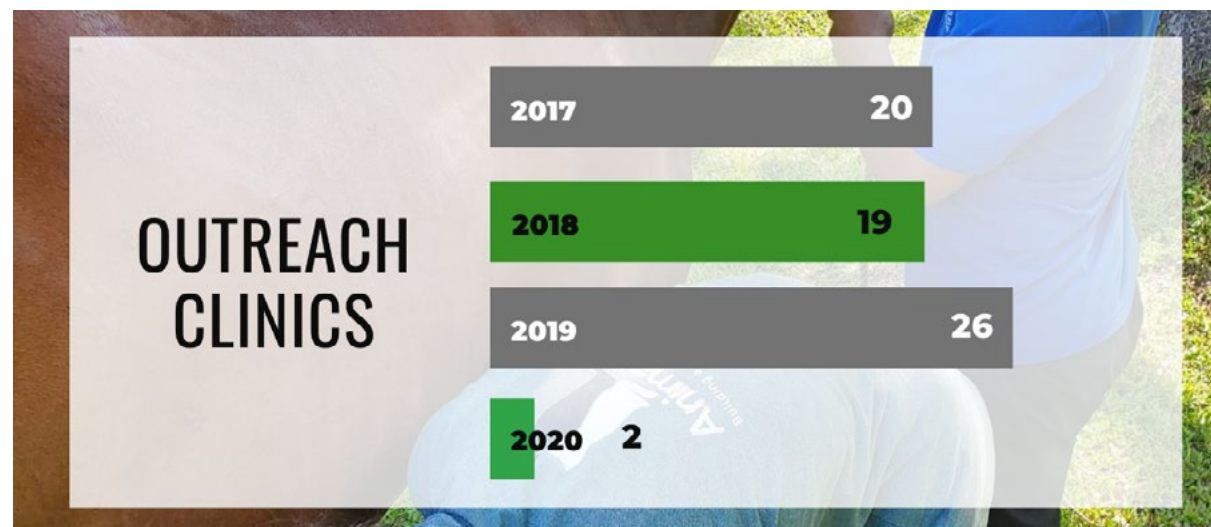

We've been offering outreach clinics since 2012; visiting communities that are often unable to access any one of our permanent clinics.

Over two days in February 2020 we held one of our many planned outreach clinics for the year. During this clinic and by working together with the Ministry of Agriculture in Labasa, we were able to desex 23 dogs. Because of COVID-19 we had to cancel the rest of our outreach efforts until further notice, and it was not until November, some nine months later, that we were finally able to have another outreach clinic—our annual clinic in Ba.

With our outreach visits, we are removing the geographic limitations and, to a large extent, the financial burden of providing basic care to animals within local communities.

It was gut wrenching to know we were unable to help more animals in 2020 because of the impacts of COVID-19, but we're working on bolstering our efforts in 2021.

# 8. SHELTER

**Our Animals Fiji Nadi shelter is an Adoption Guaranteed Facility, which means we do not euthanize any animal once they are accepted into shelter. However, this also means we have to wait until animals are adopted before bringing more in.**

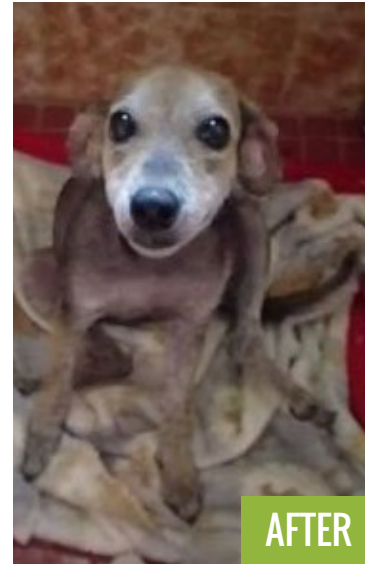

If we overcrowd our shelter, we put all the shelter animals at risk of disease and poor quality of life. We ask those who surrender animals to us at times when we are full to care for the animal in need or ask family or friends to care for them until we have space available.

**Animals Fiji only euthanizes as an absolute last resort. This ensures that no animal is left to die alone on the street, starving or getting injured.**

We do not like euthenizing animals—it is the worst part of our job—but it is sometimes necessary to protect the health and wellbeing of all animals in shelter as well as the community. This, in turn, will ensure we can help more animals over time, eventually making our shelter and all other shelters obsolete.

BEFORE

AFTER

## BAMBI'S STORY

**Bambi was brought to us in a critical condition in July by good Samaritans, who spotted her on the side of the road barely hanging on to life.**

At her intake examination Bambi was suffering from mange, scabby patches all over her body, internal parasites, malnutrition, and emotional injuries due to a tough start to life.

With treatment, lots of love and care from our team, and the generous donation made by the couple that found her we were able to turn little Bambi's life around. She grew happier and healthier over her two months with us and after being desexed, dewormed, de-fleaed and fully vaccinated; she found her furever home.

The adoption fee for Bambi, paid by her furever family, was FJ \$50, just like all adoptions. This fee includes a starter pack to help the new family get into the routine of preventative care for their new family member. Adoption fees are subsidized to make the cost of adopting a pet affordable to members of our community. The actual cost to Animals Fiji, on average is FJ \$350 per animal for their care and treatments during their time in our shelter.

Bambi's dad has been a few times with Bambi's fur siblings and we love to hear and see photos of how well she is doing.

**WE HAVE NO PLANS TO BUILD MORE SHELTERS  
BECAUSE WE AGREE WITH PETA'S POSITION.**

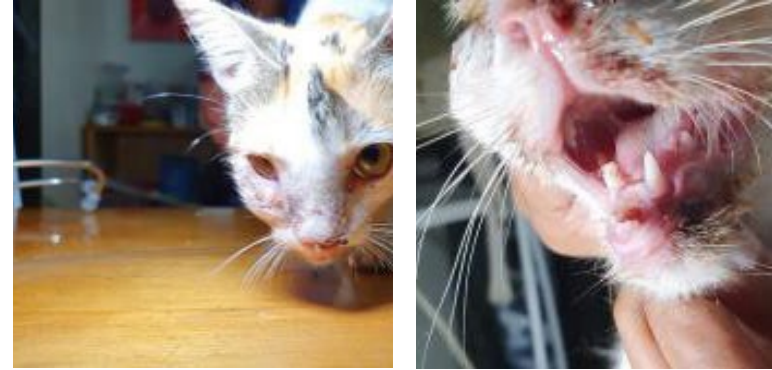

“

*“A shelter should be a temporary compromise for dogs & cats. It is not a solution to companion animal homelessness. Dogs & cats need more than food, water & shelter from the elements. They need & deserve loving care, regular human companionship, respect for their individuality, & the opportunity to play & run. As difficult as it may be for us to accept, euthanasia (carried out by veterinarians or shelter staff trained in intravenous injection of sodium pentobarbital) is often the most compassionate & dignified way for unwanted animals to leave this uncaring world.”*

**- PETA (PEOPLE FOR THE ETHICAL TREATMENT OF ANIMALS)**

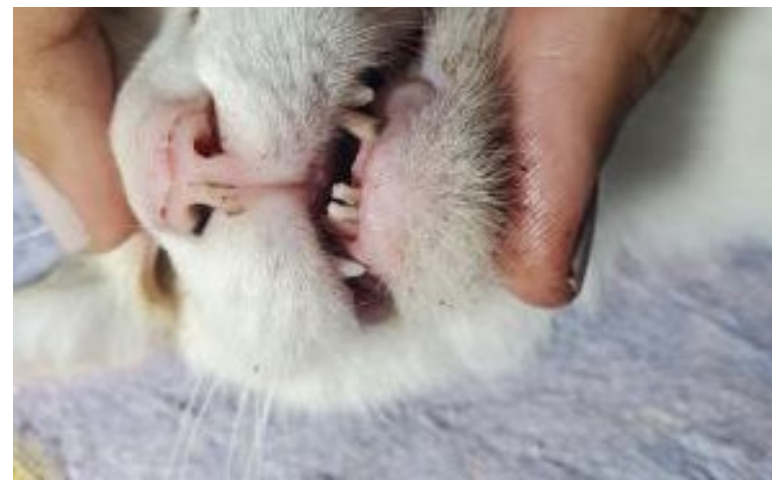

# 9. EMERGENCY SERVICES

Stories like Kitty's are all too common in the North and even though we are temporarily without a full-time vet in our Northern Clinics, we're still focused on helping as many animals as we can with what we have.

Although our limited resources do not allow us to operate a 24-hour emergency service or be everywhere, we do try our absolute best to work within our means and offer limited after-hours and emergency services to the public. At an absolute minimum we can provide veterinary advice over the phone.

Dr. Ashitosh, Dr. Alex, Dr. Jeff, Ashmita, Brenda, Sharral, Alice and the rest of our medical team did a fantastic job in 2020 to ensure we do all that we can to help on days we are open, closed, and after we have gone home.

## KITTY'S STORY

At the beginning of October, our Northern Outreach team received an emergency call on a Sunday from Labasa. A cat, Kitty, had returned home with an injury to her face. Kitty's owner drove her 85 kilometers to our Savusavu clinic to see our Vet-in-Training, Ashmita and Veterinarian, Dr. Jeff.

Kitty had a jaw fracture. Under the tutelage of Dr. Jeff, Ashmita was able to correct her fracture and Kitty was able to return home that night. We were able to provide postoperative care, as well as remote supportive care, until her follow up appointment a couple of weeks later. Kitty made a full recovery.

# OUR AIMS

**1. CONTROL  
DOG & CAT  
POPULATION**

**2. STOP  
EXPLOITATION**

**3. IMPROVE  
ANIMAL  
WELFARE**

**4. INNOVATE**

# 1. CONTROL DOG & CAT POPULATION

Population management is critical for the overall wellbeing of dogs and cats; decades of research has proven this to be true.

Roaming dogs may encounter a range of welfare problems, including malnutrition, disease and abusive treatment. And uneducated attempts to control the population may also present significant welfare problems including inhumane methods of killing, cruel methods of catching and poorly equipped holding facilities.

Animals Fiji supports the humane population management method set out by The International Companion Animal Management coalition (ICAM). The most effective and humane population control is managed through spaying and neutering (desexing) along with foundations of advocacy, community engagement, and education.

**We've been creating opportunities and offering desexing as much as possible, but in 2021 we will be adding more veterinarians to our team and building a supportive structure that we have never tried before.**

Next year will see us expand our communications, canvassing, community outreach and education. These foundations will construct a population management system that will create a positive human-dog/cat relationship and therefore a more harmonious environment for our family and friends in Fiji.

## 2. STOP EXPLOITATION

**The exploitation of animals in Fiji comes in two major forms: breeding of domestic animals (cats and dogs) and trading of wildlife.**

‘Backyard breeding’ is extremely prevalent in Fiji. Backyard breeders are considered unethical dog breeders who are usually motivated by profit—often at the expense of the dog’s health, hygiene, and care. In Fiji most ‘breeding’ is done with minimal or zero health checks by a veterinarian. The subsequent sale of these puppies or kittens without proper time with their mothers, adequate vaccinations or parasite treatments causes unnecessary death and the spread of disease. It can also lead to an increase in animals that are unowned or semi-owned roaming the streets.

**We won’t be able to ever reduce human-animal conflict or control the dog population of Fiji if we do not regulate and professionalize breeding with veterinary input and standards.**

Putting a stop to the sale and trade of wildlife--specifically native Fiji iguanas and parrots—is something else we have been working towards for years. These animals are protected by the Endangered and Protected Species Act 2002 and internationally, they are listed within the international agreement between governments, CITES (the Convention on International Trade in Endangered Species of Wild Fauna and Flora).

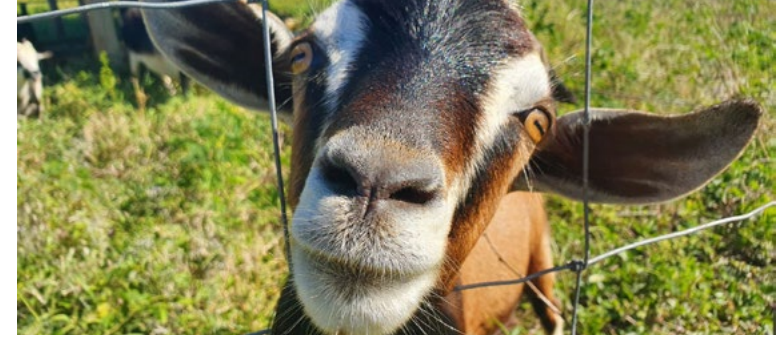

With our focus on community engagement, we hope community members will feel more comfortable reporting animal exploitation. In the long term we would love to see to have a task force with the Ministry of Environment, Ministry of Agriculture, Fiji Police and others to prosecute those breaking the law, ultimately deterring others from partaking in these activities.

**The sale of wildlife is illegal.**

If you see a native bird, bat, or iguana being sold on social media or elsewhere - **it must be reported immediately.**

# 3. IMPROVE ANIMAL WELFARE

Animal welfare is connected to larger systemic challenges for people and their pets or farm animals. Outside of Suva and Nadi, Fiji is a resource desert for veterinary care. Even with the internet—'knowledge at our fingertips' - there is a lot of misguided information on social media and other websites about veterinary care.

Animals Fiji has been removing barriers for the last nine years through direct care; offering professional veterinary advice through our platforms and educational resources at all of our clinics as well as online.

In 2021, we want to grow our outreach clinics and get more people involved to help us expand veterinary services and education. We plan to achieve our mission by illuminating fundamentals, working within our financial limitations, focusing on regenerative agriculture and working inclusively.

# 4. INNOVATE

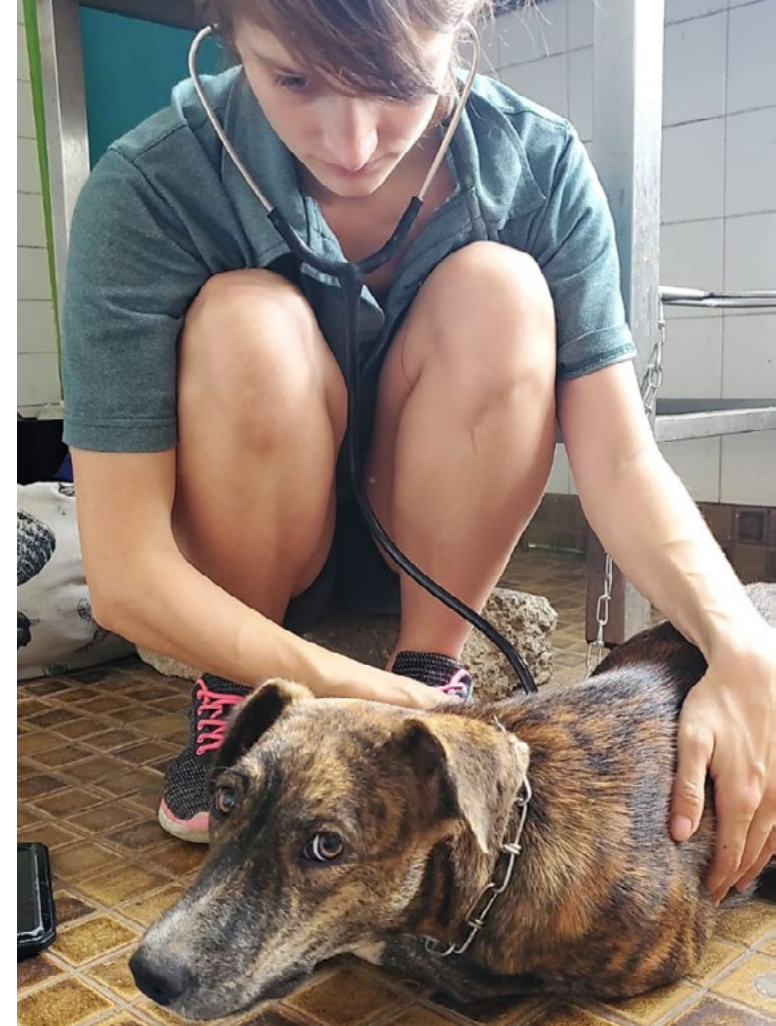

**The existing human boundaries of institutional barriers for health and wellbeing are affecting animal welfare. So we're moving toward a more community-centric model of animal sheltering.**

By shifting to greater community engagement, we can create operations that allow our shelters to operate within capacity for care, rather than be completely overwhelmed and strained to deliver the care and enrichment we are driven to provide. So, this is our huge opportunity for major system change within the animal sheltering world," said Dr. Hawkins at the AVMA Virtual Convention 2020.

The most significant of our recent innovations is the launch of our Manumanu Missionaries. These are volunteers who are helping their communities by providing animal transportation to an from their desexing appointments at one of our clinics, and who we are working with to discover what more we can achieve together to benefit their communities.

We now also offer remote phone and video consults for those who have the technology and are unable to reach one of our clinics in person.

We also continue to improve our processes and systems including our standard operating procedures, upskilling and certifying of staff, and streamlining stock.

# OUR TEAM

Even under the increased stress and strain of COVID-19, our team is stronger than ever! While we are all imperfect humans, we truly have huge hearts and have proven time and again that we always put the animals first.

March 2020 saw us lose Sophia and Bec, our invaluable Australia Volunteer Program volunteers, as they had to be abruptly evacuated to Australia because of COVID-19. We are so grateful for their time with us as volunteers and pleased to announce that we have welcomed Bec back to Fiji and that both remain involved with Animals Fiji in new roles.

Our Northern Outreach Veterinarian, Dr Alex, also departed in 2020 as she migrated back to the United Kingdom to raise her two children. Alex has been with us for four years and we will miss her greatly.

**Despite the distance between our two bases on Viti Levu and Vanua Levu our small team is very close. We are extremely grateful for our team members, the majority who have been with us for a minimum of two years.**

**We are thankful to those that have been a part of Animals Fiji's vuvale, giving passion, care and hard work to animal welfare in Fiji—VINAKA VAKA LEVU!**

**Brenda**

*\*As at 31 Dec 2020\**

# VOLUNTEERS

2020 started off with some fantastic volunteers: Dr. Chloe Graham, Veterinary Nurse Vanessa Lanske and Vet Students Clara, Andrea, Camilla, Heidi, Margit and Sam.

But before the first quarter of the year was over, the COVID-19 pandemic was just beginning to reach Fiji's shores. Towns and cities were locked down but even more significantly, our borders closed. This meant we were unable to host our usually consistent stream of qualified volunteers, nurses, doctors and veterinary students.

We're hopeful that by the end of 2021, the borders will be at least somewhat open and we'll be able to have veterinary volunteers--students, practicing vets, and nurses / technicians--join us while on their visits to Fiji.

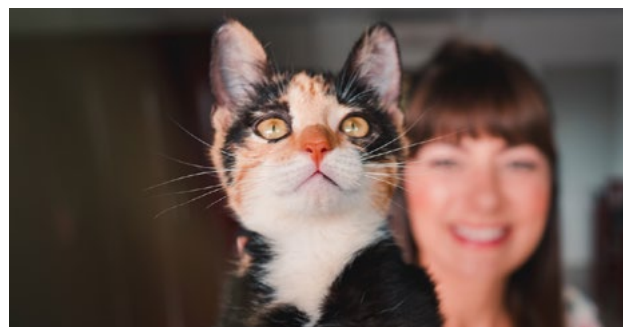

# FUNDRAISERS

The fundraisers that we had planned for 2020—a St Patrick's Day Quiz Night in March and our major annual themed evening in September—were cancelled due to COVID-19.

However, our largest online fundraiser ever was organised by Jason and Nikki from Gone with the Wynns - @thewynns), who asked their supporters to donate to Animals Fiji after they rescued and then fostered Pip the Rescue Cat. The average donation was between FJD 10-50 and totaled to over FJ \$60,0000. These funds have sustained us during the tough times and ensured we still have the funds to continue subsidizing services, to purchase medication and suture material and to continue operations and treatments for the animals. We can't thank the Wynns enough for their incredible support and generosity.

In 2021, we're focused on fundraising to acquire an X-ray machine for our Savusavu clinic, which will be the first and only X-ray machine for the Northern Division.

# CLINICS

## Animals Fiji Nadi Clinic & Head Office:

Clinic & Shelter Physical Address: Lot 1 Koroniqava Road, Nasoso, Nadi, Fiji

## Animals Fiji Savusavu Clinic:

Nakama Road, Savusavu, Vanua Levu, Fiji.

## Animals Fiji Lautoka Clinic

Lautoka City Works Depot, Dravuni St, Lautoka.

## Animals Fiji Labasa Clinic

Currently operating part time out of the Ministry of Agriculture office in town.

# HOW YOU CAN HELP

There is a lot of work to be done & we need you. Join us in our mission through any of the following ways:
